

ABSTRACT OF THE DISCLOSURE

An extensional hubcap docking structure comprised of anchoring mounts disposed on the back surface of a hubcap and clip components coupled onto the anchoring mounts. Elastic components are situated between the hubcap anchoring
5 mounts and the clip components. When the hubcap is fully installed onto the tire wheel and the hubcap is subjected to an outward force that displaces the anchoring mounts outward, the elastic components deform and shift such that the hubcap is kept safely and tightly positioned on the wheel rim.
